

CSC

CSGov's MIGRATION TO THE CLOUD

The CSC Advantage

- 50+ years of government experience
- 100+ global alliances
- 100+ contract vehicles
- 75+ agency customers
- Holistic approach to solving business challenges
- Deep domain knowledge
- Global scale and reach
- Technology independence

Using our proven processes and Racemi tools, CSC successfully migrated mission-critical apps to the Amazon Web Services (AWS) GovCloud in record time.

Like government agencies, corporations face increasing pressure to consolidate data centers and move to cost-effective, flexible cloud computing. So how do you determine what it takes to quickly and seamlessly move hundreds of applications to a secure, scalable cloud environment?

CSC knows — from first-hand experience — that it takes the right team, working in collaboration with the right partners, to achieve the right results. Learn how we honed our expertise with a highly complex migration and how we can help your agency do the same.

Our Challenge

After more than 55 years of operating as one company, CSC is separating into two publicly traded, pure-play leaders: one to serve commercial and government clients globally (CSC) and one to serve public sector clients in the United States (CSGov).

Critical Teaming for Rapid Success

With an eye on 120 days to separation, we quickly identified our target location: AWS FedRAMP-certified GovCloud. AWS is also our global strategic alliance partner, offering a high-value, complete cloud offering to CSGov's public sector customers. Then, we added to the equation Racemi's cloud migration tools, designed to optimize AWS — and we had the best partners for this effort.

To meet our objectives, we formed a dedicated team of network and firewall engineers and applications architects to develop the solution for our unique challenge. We leveraged architectural support from AWS to help us define and effectively manage the destination environment, while we served as the integrator to:

- Determine the best cloud approach and identify applications that needed to migrate
- Leverage our cloud transition offering to develop a strategy and plan of action for migration
- Enable servers to continue working with no disruption as Racemi's capture tool ran unobtrusively
- Synchronize the data and drive users to the AWS environment

About CSC

CSC is a global powerhouse in business and technology transformation, supporting federal and state government in the United States. With 50+ years of public sector experience and our commercially developed best practices, we combine next-generation technology with innovative end-to-end solutions to help you meet tough challenges.

Applying Best Practices to Your Agency

CSGov took on a great challenge with this project. It was a large project that required successful results on a consolidated timetable of 4 months. In that short time, we refined our existing best practices for a complex, involved and fast migration. From this first-hand experience, we bring you the technical expertise, team and confidence to help your agency seamlessly accelerate your path to the cloud.

Delivering Innovation Together

With an extensive global alliance network, deep domain knowledge and expertise supporting agencies in the public sector, CSC is the essential link between your agency and the cloud. We'll collaborate with you and our global alliance to deliver innovative solutions together that meet your unique mission needs.
